

# Cranberry, Dragon Fruit, & fiRmware (CDR)

---

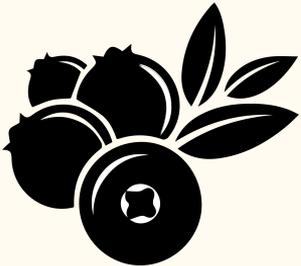

Brandon Amano, Kimpee Castro, Brian Chan, Scott Nakashima. Ryan Walser, Garrett Young

April 2nd, 2016 - Smart Campus Energy Lab (SCEL)

# Updates - Hardware

## Cranberry

- Populated one V3.2 board
- Functionality of power, MCU, and XBee modules verified
- Sensor board returns accurate readings

## Dragon Fruit

- Populated 5 boards from versions 1 and 2
- 4 of 5 sensor boards give correct readings

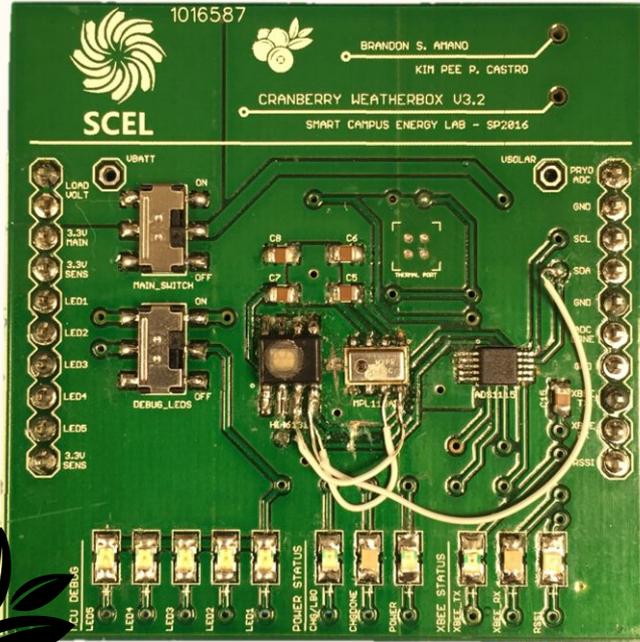

# Updates - Firmware

- Completed testing and confirmation of Apple, Cranberry, and Dragon Fruit's sensors
- Unique schema for Apple
- Updated schema sizes for transmission
- Apple & Cranberry pin configuration updates
- XBee configurations corrected for transmission
- Full integration implemented on all 3 current generations
- Pull request submitted for Firmware

# Major Issues - Hardware

## Cranberry

- Incorrect part package for humidity sensor
- Placement of components led to difficulty in soldering parts

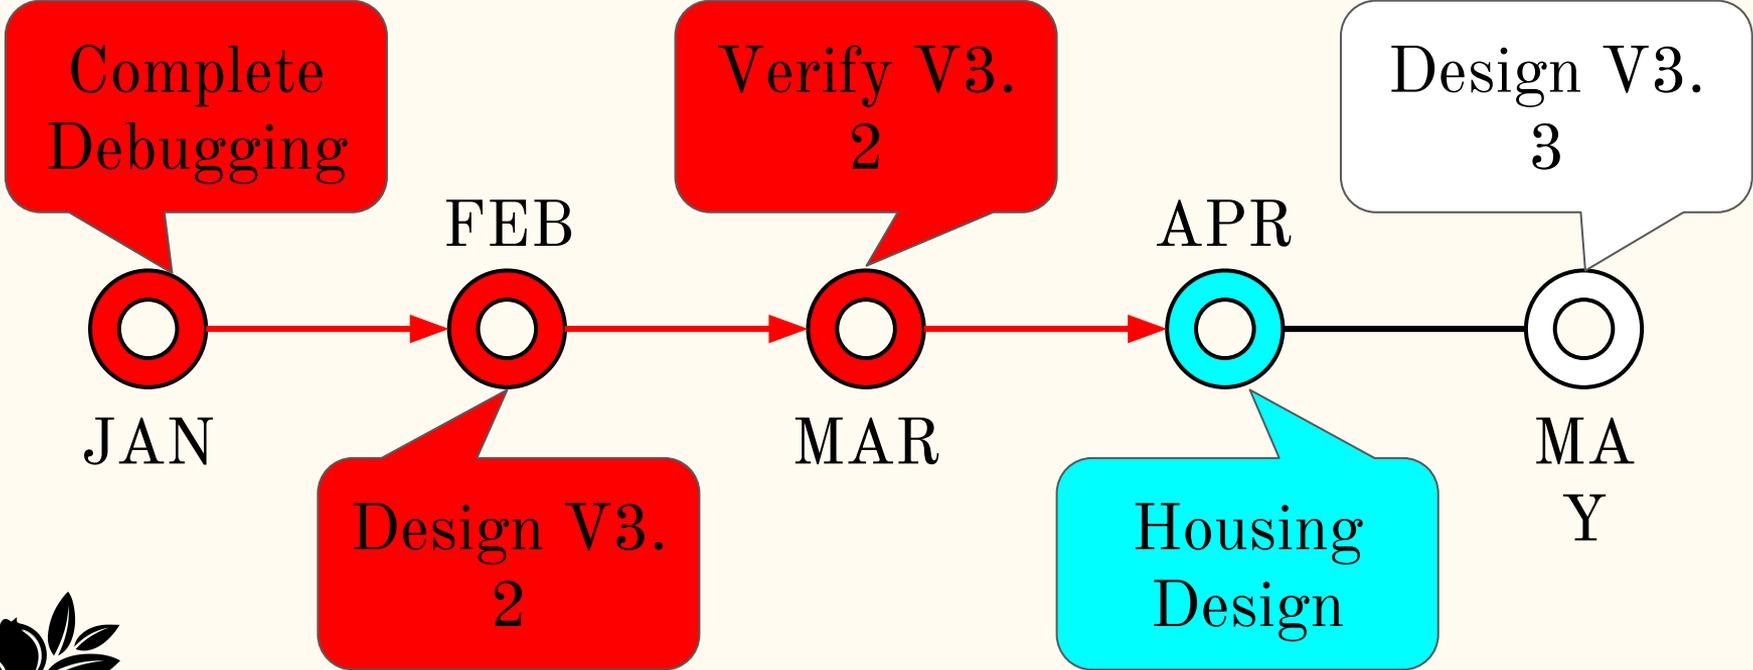

## Dragon Fruit

- Random phantom volt from XBee

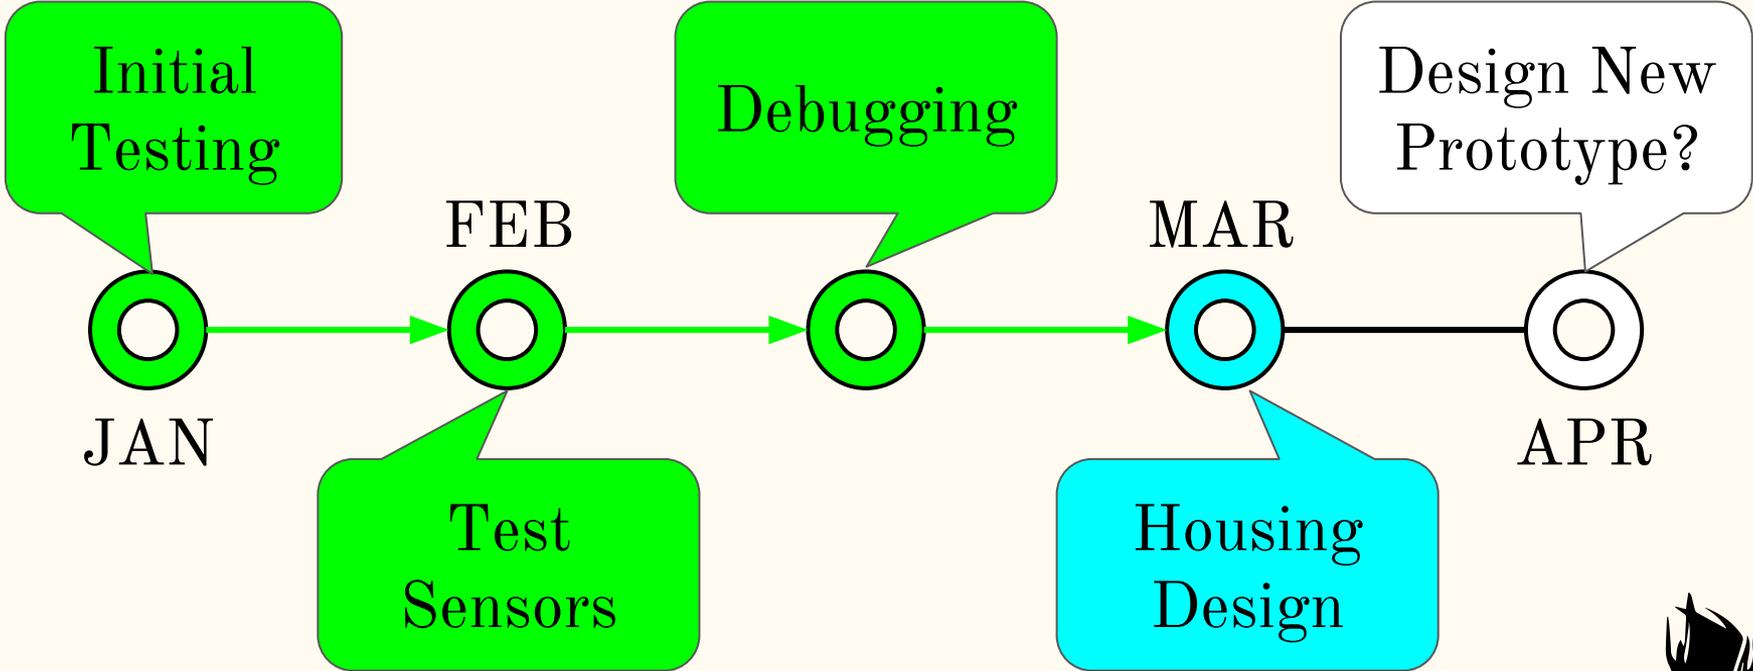

# Major Issues - Firmware

- Incorrect XBee configurations resulted in failed transmissions (Resolved)
- Packets weren't transmitting consistently (Resolved)
  - Original schema was too large
- Health check logic resulted in continuous Power Save Mode (Resolved)
- Scaling factors (Resolved)
- Function conflicts with a library (Resolved)

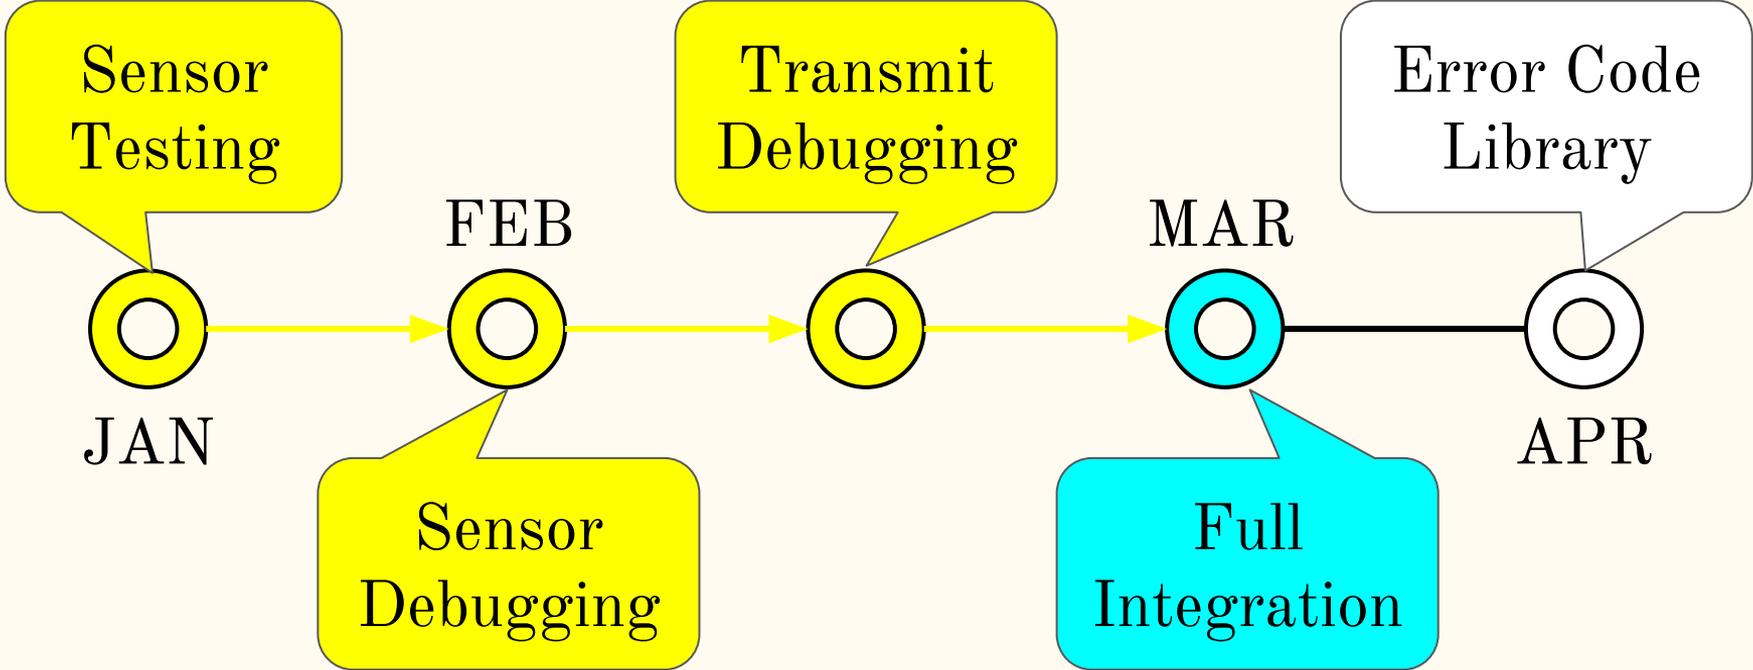

# Schedule - Cranberry

# Schedule - Dragon Fruit

# Schedule - Firmware
