

EE 496 Dragon Fruit Final Presentation

Brian Chan
Garrett Young
Advisor: Anthony Kuh
December 5, 2015

Agenda

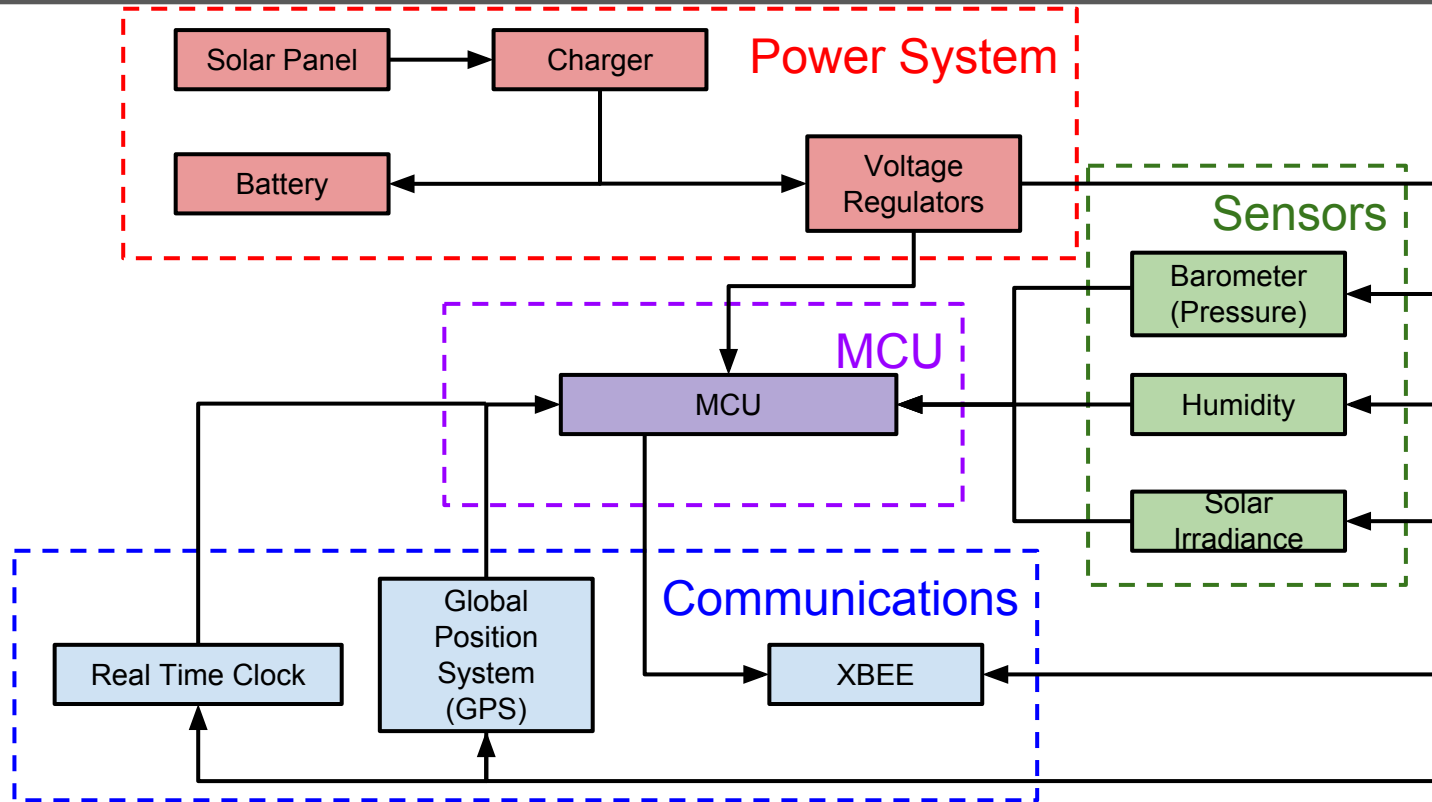

- Goals
- Block Diagram
- Final Status
- Problems
- Future Improvements

Goals

- Research parts and design a PCB
- Get a working prototype by the end of November
 - Accurate readings from each of the sensors
 - Low power consumptions
 - Communication between module and server

Block Diagram

Final Status

- Completed Final Draft of documentation
 - BOM (Bill of Materials)
 - Power Budget
- Finished layout of PCB
 - Two board design - main board, sensor board
 - Two versions of the board
 - 2-layer & 4-layer

Final Status [cont.]

- BOM
 - Total Cost of the system \$320
 - Excludes housing, PCB fabrication
 - [Dragon Fruit Bill of Materials](#)
- Power Budget
 - [Dragon Fruit Power Budget](#)

| Battery Type | Runtime (Hours) | Runtime (Days) |
|-----------------------------|-----------------|----------------|
| 6600mAh Li-ion 3.7V | 141.15 | 5.88 |
| 15600mAh Li-ion 3.7V | 333.63 | 13.9 |

Problems encountered

- Time constraints
- Power distribution
 - Required boost regulator
 - Incorrect resistor value for charging chip
- Changes in schematic
 - Redesigned board to accommodate

Future Goals/Improvements

- Possible new sensors
 - Add Real Time Clock and GPS
 - Incorporate anemometer
- Design Housing
- Deploy working sensor modules by end of Spring Break

Plans for Next Semester

- Test and debug fabricated board
- Start testing power subsystem and sensors
- Start designing the housing

Special Thanks To...

- Advisor: Dr. Anthony Kuh
- Mentors: Christie Obatake, Kenny Luong, Jonathan Liang
- Cranberry: Brandon Amano, Kim Pee Castro
- Xbee: Raydan Bala, Ernesto Lorenzo
- Firmware: Scott Nakashima, Ryan Walser
